## INLINE SAFETY FILTER MODEL 2424

Model 2424 Filter is designed with a removable 24" x 24" screen assembly which can accommodate a variety of screens types. Inline Safety Filters are typically shipped with a 30 mesh stainless steel wire cloth which allows most dust particles to pass through while capturing the fibers that normally accumulate on the leading edges of the impellers of High Vacuum exhausters.

This unit come complete with a heavy duty hinge assembly and a simple door closure handle, allowing for quick access and making cleaning a simple procedure without the need for tools.

Installation is simple. Standard 8" inlet and outlet stubs accommodate most exhausters used in textile applications. Custom sized stubs are available upon request.

This unit is offered with several options:

- Filter Screens with various wire and/or perforations for different applications
- Differential gauge and/or differential switch to indicated excessive waste buildup
- Back port for inlet surge control package
